

Population Medicine: MSc, PhD

Our graduate programs are designed to provide our students with advanced knowledge and skills in study design, data collection and analysis, problem solving, and communication, in the fields of epidemiology, health management, and theriogenology to address current animal and public health issues often using a One Health approach.

Program

We offer Doctoral programs and two options for our MSc programs. Masters of Science students may choose between a major research project (MRP) option (approximately three semesters), or a research-based thesis option (approximately six semesters). The PhD programs require the successful completion of a qualifying exam and the defense of a research-based thesis.

Research Fields

- Epidemiology (MSc thesis option, MSc MRP option, PhD)
- Theriogenology (MSc thesis option)
- Health Management (MSc thesis option)
- Public Health (MSc thesis option, MSc MRP option, PhD)

Admission Requirements

Applicants require a minimum average of “B-” in their last four semesters of full-time study. Students may enter the MSc program with an Honours Bachelor’s degree or a DVM. Admission to the PhD program is usually granted to holders of an MSc degree who have demonstrated superior performance and aptitude for research. Infrequently, well qualified DVM or honours degree holders may be accepted directly into the PhD program.

Application Deadline:

Ongoing

Entry: Fall, Winter, Summer

Population Medicine is a department at the Ontario Veterinary College, and is world-renowned in animal health with a growing emphasis on One Health approaches. UofG aligned perfectly with my interest to study veterinary epidemiology.

– Carrie McMullen (MSc, Population Medicine)

Faculty

We have faculty strength across a breadth of disciplines focused on epidemiology, animal health management, and public health. Our faculty members conduct leading research in epidemiology and health management of agricultural and companion animal species, theriogenology, the epidemiology of zoonoses and foodborne and waterborne diseases of humans, infectious disease modeling, clinical veterinary communications, animal behaviour and welfare, public health, and One Health.

Advising

Prior to applying or soon after applying to the MRP and thesis-based programs, applicants need to secure a faculty advisor.

Funding

Funding is provided for a minimum of two years for the thesis-based MSc and three years for a PhD. Numerous scholarships and awards are available on a competitive basis.

ARE YOU INTERESTED IN:

- Epidemiology
- Public Health
- One Health
- Infectious Disease Modeling
- Health Management of Agricultural and Companion Animals
- Biostatistics
- Animal Behaviour & Welfare
- Clinical Veterinary Communications

CAREER OPPORTUNITIES:

- Academia
- Government agencies involved in agriculture, food safety, and public health
- Non-governmental organizations
- Consulting firms
- Agricultural and pharmaceutical industries
