

Master of Plant Agriculture: MPAg

Plants and crops play a critical role in our ecosystem and are essential for a sustainable food system. The University of Guelph's professional course based Master of Plant Agriculture (MPAg) provides you with career-focused knowledge and expertise in plant breeding, crop production and plant science for you to pursue leadership positions in the private and public sector.

uoguelph/mpag

Program

The Master of Plant Agriculture program allows you to focus your courses to match your own unique interests and career focus. This program is ideal for recent graduates or working professionals that wish to gain scientific, cross-discipline skills in a hands-on learning environment through coursework. This program is generally completed in 3-4 semesters.

Specialize your program in:

- Crop Production Systems
- Biochemistry and Physiology
- Breeding and Genetics

Hands-on Learning

Learn about existing and emerging technologies in the agri-food and plant production sector through course based, collaborative projects that enhance your employability and analysis skills.

Connect with the Sector

Connect with agri-food sector employers through site visits, field studies, and guest speakers. Students deepen their understanding of plant agriculture through courses, hands-on learning, and interactions with professionals and researchers, then apply concepts in a 12-16 week work-integrated learning experience with government, industry, or non-profit partners.

Admission Requirements

Applicants must meet the admission requirements of a honours (4-year) Bachelor's degree, or equivalent, from a recognized University in a relevant field of study* with an average standing of at least a 'B' (70%) average.

**You are still eligible to apply if you have an honours bachelor's degree in an unrelated field of study but have taken courses in related areas and/or gained relevant work experience since completing the degree.*

All applications will be reviewed by the MPAg Program Committee and will be evaluated based on:

- Two (2) referee assessments
- A statement of interest in the program and/or career goals

Note: Related work experience is not required but beneficial.

Application Deadline:

Domestic: June 15
International: February 1, early application is strongly encouraged.

Entry: Fall only

ARE YOU INTERESTED IN:

- Biological and Cultural Control of Plant Diseases
- Advanced Plant Breeding
- Physiology of Crop Yield
- Metabolic Processes in Crop Plants
- Applied Bioinformatics
- Fruit and Vegetable Technology

CAREER OPPORTUNITIES:

Employers of graduates of the MPAg program may include:

- Syngenta
- Health Canada / Canadian Food Inspection Agency
- Corteva Agrisciences
- Bayer Crop Science
- Government Agricultural Agencies
- Agriculture and Agri-Food Canada

Plant Agriculture: MSc, PhD

Plants provide food, raw materials, and a healthy environment, and are the cornerstone for life on earth. Plant Science is key to understanding and enhancing plant life. Research in the Department of Plant Agriculture is divided into four areas: Plant Biochemistry and Physiology, Plant Breeding and Genetics, Crop Production Systems, and Bioproducts.

uoguelph.ca/PlantAgMScPhD

Program

Plant Agriculture is strongly rooted in crop science and horticultural science but we now encompass applied bioinformatics; molecular genetics; genomics; field, horticultural and greenhouse crops; plant breeding; turf and grassland studies; environmental sustainability; weed science/ecology; and the use of plant materials for health, fibres and industrial products. Furthermore, we recognize that society's expectations of agriculture are changing to include a wide range of health and environmental services such as producing food with nutraceuticals, protecting biodiversity, mitigating climate change and providing alternative energy sources.

Admission Requirements

As a part of the application package, applicants are required to secure a faculty advisor to supervise their program.

- The MSc requires a Baccalaureate degree in an honours plant science/ biology program, or equivalent, from a recognized university or college with at least a B average over the last two years of full-time study (or equivalent).
- The PhD requires a MSc degree by thesis in a field appropriate to the proposed area of specialization with a minimum B average.

We offer an interdisciplinary research environment in modern, well-equipped laboratories and research stations to provide excellence in graduate education and training.

Research Fields

- Plant Biochemistry & Physiology
- Plant Breeding & Genetics
- Crop Production Systems
- Bioproducts

Our Faculty

Faculty have modern labs with state-of-the-art equipment and access to controlled environment growth facilities and numerous field sites distributed over Ontario. Faculty are located on four campuses affording a variety of opportunities and experiences for our students. Our faculty are internationally recognized as leaders in their scholarly activities. Support for research is obtained from a variety of sources including federal, provincial, international, industrial and grower sponsors.

Application Deadline:

Ongoing
Entry: Fall, Winter, Spring

ARE YOU INTERESTED IN:

- Increasing plant production efficiency
- Developing new varieties
- Understanding plant growth and development
- Weed control
- Plant-environment interactions
- Discovering new environmentally friendly industrial materials

CAREER OPPORTUNITIES:

- Crop Consultant
- Breeder/Geneticist
- Plant Physiologist
- R&D Bio-Based Plastics
