Environmental Sciences: MES, MSc, PhD

The School of Environmental Sciences (SES) offers a range of post-graduate programs geared to recent graduates, working professionals, and those interested in a research career. Our expertise spans several disciplines including apiculture, atmospheric and Earth sciences, ecology, entomology, environmental microbiology, plant pathology and protection, soil science, and environmental toxicology.

uoguelph.ca/ses

Programs

We offer two Master's options and a Doctoral program. The Master of Environmental Sciences (MES) consists of either course work or course work plus a major research paper (usually completed in three semesters). The Master of Science (MSc) consists of three courses and defense of a research-based thesis and is completed in six semesters. The PhD program requires the successful completion of one course, a qualifying exam and the completion and defense of a research-based thesis and is usually completed in twelve semesters.

Research Fields (PhD)

- Earth and Atmospheric Sciences
- Ecosystem Science and Biodiversity
- Plant and Environmental Health

Admission Requirements

Applicants require an honours science four-year degree, with a minimum "B-" (Master’s) or A- (PhD) standing for the last four semesters completed prior to entry into the graduate program.

Funding

Students in the MSc program will receive a minimum funding of $16,500 per year over a 2-year eligibility period. PhD students will receive a minimum funding of $20,500 per year over a 3-year eligibility period.

Additional funding is available for NSERC scholars and International students and all students may be guaranteed one or several teaching assistantships worth an additional $2800 depending on their program and entering average.

Experiential Training

A central part of the MSc and PhD programs is the completion of a research project or thesis. Students will experience research first-hand under the supervision of a faculty advisor, which will involve formulating a research problem, collecting and analysing one or a combination of field and lab data, critical analysis and interpretation of those data in the context of existing literature. All students (including MES) can choose courses that are almost entirely field and lab-based, combining hands-on experience with the tools and methods for that field of study.

Application Deadline:
MES: February 1 (International) and April 15 (Domestic only)
MSc & PhD: Ongoing

ARE YOU INTERESTED IN:

- Impacts of climate change on agriculture & ecosystems
- Protection of plants & pollinators
- Soil science & soil health
- Ecological change & environmental health
- Water quality
- Environmental microbiology

CAREER OPPORTUNITIES:

- Environmental consultant
- Environmental education
- Public service in science & policy
- Regulatory affairs (industry & government)
- Research scientist or technician

CONTACT INFORMATION:

MES & PhD Program Coordinator: Dr. Asim Biswas
519-824-4120 ext 54249
grdchair@uoguelph.ca

MSc Program Coordinator: Dr. Youbin Zheng
519-824-4120 ext 52741
yzheng@uoguelph.ca

Graduate Program Assistant: 519-824-4120 ext 53937
ses.gradsec@uoguelph.ca
Departmental Graduate Faculty with Research Areas

Genevieve Ali: watershed sciences, hydrology-ecology interactions, precipitation-runoff modelling, landscape classification, environmental data science

Madhur Anand: global ecological change, sustainability science, forest ecology, ecological modelling, biodiversity

Emmanuelle Arnaud: glacial geology, geology and groundwater, sedimentary geology, environmental geology

Asim Biswas: soil physics, vadose zone hydrology, precision agriculture, proximal soil sensing, digital soil mapping, soil spatial variability

Michael Dixon: controlled environments, life support, space exploration

Kari Dunfield: environmental microbiology, microbial ecology, soil microbiology, bioremediation

Adam Gillespie: soil biochemistry, organic matter chemistry, soil health, carbon modelling, environmental spectroscopy, digital soil mapping

Brandon Gilroyed: anaerobic digestion; biorefinery; fermentation; industrial crops; waste valorization

Susan Glasauer: wetlands, biogeochemistry, metals, microbiology, soil chemistry

Paul Goodwin: ginseng, tobacco, soil, bacteria, fungi, molecular biology

Jackie Goordial: environmental microbiology, geomicrobiology, molecular ecology, bioinformatics, polar microbiology, climate change, astrobiology

Tom Graham: controlled environment agriculture, space biology, water remediation, food insecurity

Ernesto Guzman: bee biology, bee pathology, bee behaviour, bee genetics, bee ecology

Marc Habash: water quality, microbial source tracking, waterborne pathogens, microbial biofilms

Bev Hale: ecotoxicology, soil contaminants, soil remediation, metals, risk assessment

Rebecca Hallett: integrated pest management, biological control, invasive insect species, insect-plant interactions, insect population dynamics

Richard Heck: pedology, computed tomography, structure, magnetic susceptibility

Tom Hsiang: turfgrass diseases, forest pathology, fungal genomics

Scott Krayenhoff: urban climate modelling, adaptation, trees

John Lauzon: soil science, soil fertility, soil management, nutrient management

James Longstaffe: environmental chemistry, natural organic matter, soil and groundwater contamination, remediation, analytical instrumentation

Jesse Popp: Indigenous knowledge systems, wildlife ecology, two-eyed seeing

Ryan Prosser: mollusk biology, ecotoxicology, ecological risk assessment, aquatic toxicology, soil toxicity

Nigel Raine: pollinator conservation, pollinator behaviour, impacts of environmental stressors on bees, pollination ecology

Neil Rooney: food web stability, biodiversity, environmental assessment, aquaculture, agricultural effects

Jonathan Schmidt: insect sensory and hormonal physiology, biological control, Collembolan ecotoxicology, spiders in agroecosystems

Cynthia Scott Dupree: sustainable pest management, entomology, ecotoxicology

Paul Sibley: toxicology, ecology, water quality, risk assessment

Naresh Thevathasan: agroforestry, soil health, water quality, carbon sequestration

Laura Van Eerd: sustainable soil management, agriculture, cover crops, nitrogen biogeochemical cycling, soil health

Paul Voroney: soil organic matter stocks, soil carbon modeling, soil phosphorus availability

Claudia Wagner Riddle: soil-plant-atmosphere exchange, micrometeorology, biogeochemical cycling

Jon Warland: agricultural meteorology, measurement and modelling of atmospheric turbulent transport, environmental instrumentation

Andrew Young: Insect diversity, diptera taxonomy and phylogenetics, native pollinators, community science, insect identification

Youbin Zheng: cannabis production, controlled environment agriculture, greenhouse production, environmental horticulture
